DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 01/13/03 has been entered.

Claim Objections

2. Claim 22 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Welding of further section to the contact piece is already included in claim 20.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 20-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ogden et al (EP 0 707 321) in view of Gottlieb (3,821,694).

Ogden (Figures 1-2, and Page 3, lines 5-15) shows a cable with a plurality of fine copper wires 15 wherein a further section is formed by pressing the strands together which

is welded to a contact piece (an end portion of an apparatus). The further section extends at angle (0, 180 or 360 degrees) to the longitudinal axis of the cable. But Ogden does not show the strand welded to only one side of a flat contact piece. The instant invention does not provide any reasons or specific problem to be solved by this feature. Gottlieb (Figure 3) shows strands of a battery terminal connecting cable attached on one side of a flat contact piece. Since the end of the Ogden's cable is flattened, it is most logical and would have been obvious to one having ordinary skill in the art at the time of the instant invention to connect the Ogden's flattened end to a flat contact piece of the apparatus on one side as shown by Gottlieb. Gottlieb shows the further section to extend at an oblique angle to the longitudinal axis of the cable 16.
